# MONITOR, CONTROL AND BILL

## ECARUP PLATFORM

eCarUp integrates charging stations into its platform regardless of the hardware-manufacturer. Once integrated with the free app, you can manage and bill the stations easily and without any fixed costs.

- Define who, when and at which price
- Barrier-free use
- Real-time energy data
- Automatic billing
- Integration into Hubsport roaming network (optional)

## ADDITIONAL MODULES

In addition to the free basic functions, you can add the following modules to all or selected stations in your account.

### MAINTENANCE

Maintenance allows advanced configurations and diagnostics of OCPP stations. This allows you to detect errors faster and remedy them remotely.

### LOAD MANAGEMENT

Load management distributes the available power to several charging stations. It ensures that the defined maximum current level is not exceeded.

### REPORTS

Reports allow a detailed evaluation per charging point or user. Costs are displayed transparently. The time period and VAT can be defined flexibly.

## THE ADVANTAGES AT A GLANCE:

With eCarUp, you can offer your customers a simple and cost-effective service that meets all their needs.

- ✓ Free app with access to web-portal for station configuration
- ✓ Easy to install and place in service
- ✓ Share your charging station with anyone
- ✓ No fixed management costs
- ✓ Flexible installation of eCarUp updates
- ✓ Manage charging stations based on your personal preferences
